utreach Summary (2017)

Participants (target audience, # in attendance)	Outcomes/Follow-up process for participants w/positive findings (Screening only)	Effectiveness of Activity (value, lessons learned, recommendations for improvements)
Children and Adults		Verbal and written education is given to each participant. UV Index for that time is displayed. Those interested in getting further and clinical assessment, are referred to our MMG practices or Physician Referral Hotline. Children are educated on the dangers of sun exposure for long periods of time. We give them a solar bead bracelet and when that clear bead turns color, the child is taught to seek shade or re-apply sunblock.

nity Day

Participants (target audience, # in attendance)	Outcomes/Follow-up process for participants w/positive findings (Screening only)	Effectiveness of Activity (value, lessons learned, recommendations for improvements)
All adults over 18, mostly African American and Caribbean. <i>67 participants in attendance.</i>		Verbal and written instructions on how to use it and how to interpret the results are given to each participant. Colorectal Health and Cancer Awareness.

Participants (target audience, # in attendance)	Outcomes/Follow-up process for participants w/positive findings (Screening only)	Effectiveness of Activity (value, lessons learned, recommendations for improvements)

<p>Corporate site who has a large number of employees who play beach volleyball outdoors. <i>100+ attendees</i></p>		<p>Verbal and written education is given to each participant. UV Index for that time is displayed. Those interested in getting further and clinical assessment, are referred to our MMG practices or Physician Referral Hotline. Skin Health and Skin Cancer Awareness. Human Resources has been approached and educated on the importance of shady areas in that beach volleyball location. Direct observation by Health Educator asking participants for feedback after the education.</p>
---	--	--

<p>Participants (target audience, # in attendance)</p>	<p>Outcomes/Follow-up process for participants w/positive findings (Screening only)</p>	<p>Effectiveness of Activity (value, lessons learned, recommendations for improvements)</p>
<p>Men ages 50 to 75 (45 if AA and/or family history). <i>2 men in attendance.</i></p>	<p>Men were screened, PSA blood test and digital rectal exam were provided. All results reviewed by Dr. James Saidi, Urologist and they were within normal guidelines. Patients were notified by our nursing staff and copies of results are mailed to them.</p>	<p>Men are educated on risk factors, nutrition and follow up. Educational materials are provided and they are advised to share their results with their primary care physician. Registered nurses provide follow up phone calls to all the participants.</p>
